

JAKUB MŁOCEK

CYBERSECURITY ENGINEER • DEVSECOPS • SYSTEM ADMINISTRATOR

ABOUT ME

I'm a solutions-focused Cybersecurity Engineer holding an M.Sc. Eng. in Cybersecurity from AGH University of Krakow.

I drive end-to-end security across Azure Cloud, On-Premises infrastructure, and DevSecOps pipelines, combining L2 SOC operations with offensive security (Web, API, IIoT) and governance (ISO 27001, EU CRA).

I deliver practical results by breaking complex challenges into smaller components that are easy to deploy and monitor.

A former IT tutor, I enjoy the human side of security: leading awareness sessions and translating technical risks into clear business terms. Outside work I surf, skitour, bikepack, and backpack.

EDUCATION

B.Eng. in Cybersecurity, AGH University of Krakow - Jan 2025

M.Sc. in Cybersecurity, AGH University of Krakow - Jul 2026

Microsoft Azure Security Engineer Associate (AZ-500)

GitHub Advanced Security

EXPERIENCE

Cybersecurity Engineer at RBC Bearings (Nov 2024 – Present):

Sole Security Engineer driving end-to-end security across the entire project portfolio:

Azure Cloud Security Engineering:

- Designing and deploying Azure infrastructure for platform and business projects per best practices.
- Hardening Azure resources and implementing network security.
- Classifying data across Azure resources to enforce backup strategies and security controls.
- Developing Bicep IaC with CI/CD pipelines for multi-environment deployments and disaster recovery.
- Implementing Azure WAF from scratch and performing ongoing policy tuning.
- Acting as an L2 SOC Engineer: developing Microsoft Sentinel analytics rules, investigating incidents, and analyzing logs with KQL.

Implementing & Maintaining DevSecOps Practices:

- Automating DAST across the platform using OWASP ZAP and sqlmap.
- Enforcing SAST and supply-chain security via GitHub Advanced Security (CodeQL, Dependabot, Secret Scanning).
- Developing GitHub security automations.
- Conducting shift-left security assessments.

Security Engagements & Governance:

- Designing and implementing ISO 27001 policies, procedures, and EU Cyber Resilience Act compliance controls.
- Completing client security assessments.
- Leading security awareness meetings and delivering biweekly platform security reports.
- Architecting security controls for IIoT devices.

On-Premises Infrastructure Architecture & Administration:

- Designing and implementing local Proxmox environment via GitHub Actions CI/CD (Terraform, Ansible, self-hosted runner).
- Administering an internal ERP/CRM with SSO integration, automated backups, and hardening.
- Building internal LLM platforms (vLLM, llama.cpp, Open WebUI).
- Deploying PoC servers (LightRAG, PostHog, ZeroTier) and core infrastructure: SIEM (Wazuh), internal CA (step-ca), and DNS.

Penetration Testing & Vulnerability Management:

- Conducting internal penetration tests across Web, API, and IIoT environments.
- Coordinating external penetration tests and implementing remediations.

Junior IT Security Specialist – SOC L2 at Comarch (Nov 2023 – Jun 2024):

- Implemented security monitoring using HIDS (Wazuh), SIEM (Splunk), and OSquery.
- Managed system hardening and security configuration assessments per CIS benchmarks.
- Reviewed phishing emails and performed malware analysis.
- Administered and maintained Linux systems.

Participation in competitions:

In Top 3% users on TryHackMe, Laureate of Consult IT 2022, Finalist of Hack AGH 2023.

IT tutoring (Oct 2020 – Oct 2023):

Preparing for advanced computer science matura exam. Assisting with university projects.

Lifeguard (Jul 2018 – Aug 2023):

Seasonal work at seaside bathing areas, Municipality of Jastarnia
